Programme on Financial Derivatives

November 6 – 10, 2017

Coordinators

Dr Kedar nath Mukherjee
Prof Tasneem Chherawala

**National Institute of Bank Management
Pune, India**

Programme on Financial Derivatives

Financial derivatives are important tools for hedging and trading the risks of financial price volatilities that are extensively used by financial institutions and corporates the world over. Indian derivatives market has been growing, not just in volume, but also in terms of the variety of products and their standardization, and applications. In a volatile global financial market environment, financial derivatives are very useful instruments in safeguarding bottom-lines and provide alternate investment opportunities in deepening capital markets. Learning from the financial crisis of 2008, the regulatory and accounting environment, governing derivative products, has also evolved rapidly. As opposed to stifling product innovation by banning derivatives, the focus has shifted to ensuring greater transparency through stringent disclosures, market-to-market valuation of OTC products, introduction of fair valuation mechanism and reduction of counterparty credit risk by introduction of exchange traded derivatives across risk classes and central counterparties for OTC products. All of these measures aim to enhance the market and credit risk management of derivative exposures.

The Reserve Bank of India, too, has proactively facilitated the use of OTC derivatives and their clearing through central counterparties, and also the introduction of exchange traded currency and interest rate derivative products. The gradual rise in the trading volume and market share of both OTC and exchange traded derivative (Interest Rates and FX) products in India clearly shows the importance and necessity of such instruments for Indian players as well.

Against this backdrop and perspectives, NIBM has designed a Programme on Financial Derivatives to familiarize the senior and middle level officers from banks, financial institutions and corporate treasuries with various types of derivative products and to equip them with the necessary skills to structure, value and trade these products and manage the risks in their derivative portfolios.

Programme Content

- **Basic Concepts in Derivatives and Markets**
 - ✓ Derivatives Market Worldwide and in India
