# Programme in Assessment of Working Capital Requirements

A proper independent assessment of working capital requirements should be made by the credit analyst, so that sales are estimated on a realistic basis at the project appraisal stage itself. Keeping in view the installed capacity, the demand for the product, the extent of competition in the market, does not result in over-financing, extra interest burden, and even diversion of funds, ultimately resulting in deterioration of financial health of the company. The skill of the credit analyst also does not lie in just working out the permissible amount of finance against an acceptable level of holding of current assets. This is simple arithmetic process, and very often the projections are made very close to the permissible level of bank finance.

The real test of quantitative appraisal of bank credit lies in validating the propriety of the margin requirements and whether the available sources of finance and also the financial statements (both actuals and projected) indicate that the amount of margin required can actually be mobilized.

## Objectives

A five-day programme including visit to industries will help the participants understand the business and its operating cycle and make a realistic assessment of working capital requirements.
